Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

10/691,052

Applicant(s)

MILLIREN, CHARLES M.

Examiner

John m. Cooney

Art Unit

1711

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 14 February 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-32 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-32 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 0105.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

Applicant's arguments filed 2-14-05 have been fully considered but they are not persuasive.

All previous rejections are withdrawn in light of the new rejections to follow:

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Apichatachutapan et al.(2004/0266897).

Apichatachutapan et al. discloses preparations of viscoelastic polyurethane foam preparations wherein isocyanates having isocyanate content values as claimed by applicants are combined and reacted with polyol compositions which are polyether polyols based on glycerols, amines, alkanolamines, and other initiators, and wherein the compositions are combined at an NCO index as defined by the claims and in the presence of various catalyst which are encompassing of those claimed (see the entire document). Apichatachutapan et al.'s preparations exhibit impact properties which are not seen to differentiate from those of applicants' claims based on the materials and make-ups of the preparations claimed.

The claims are not seen to differ from Apichatachutapan et al. based on applicant's claims' recitation of the term "semi-rigid". Although the term "semi-rigid" may be of use to practitioners in the art for purposes of classification of the different materials for research and application purposes, this term does not lend the claims the weight of a limitation in a patentable sense. This term without further definition in the claims does not serve to distinguish the instantly claimed foams from other flexible (and/or rigid) foams based on the employment of this term alone.

The claims are not seen to differ from Apichatachutapan et al. based on the employment of the limitation "having a propylene oxide extended tip", because this limitation is only seen to require that propylene oxide be employed in the "growth" of the polyols from their respective initiator molecules.

Apichatachutapan et al. does differ from applicants' claims in that it does not specifically require that amine based polyether polyols be employed in their preparations. However, Apichatachutapan et al. does recite that amine initiators, and, particularly, the specific amines of applicants claim 32, can be used in the practice of their invention for the purpose of providing adequate isocyanate reactive components(see paragraph [0024]). Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the amine initiators disclosed by Apichatachutapan et al. in the preparations of Apichatachutapan et al. in blended combinations for the purpose of providing their isocyanate reactive effect in the preparations of Apichatachutapan et al. in order to arrive at the products and/or

processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

Claims 1-9, 11-22, are 24-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lutter et al.(5,420,170).

Lutter et al. discloses preparations of viscoelastic polyurethane foam preparations wherein isocyanates having isocyanate content values as claimed by applicants are combined and reacted with polyol compositions which are polyether polyols based on glycerine, amines, and other initiators, and wherein the compositions are combined at an NCO index as defined by the claims and in the presence of various catalyst which are encompassing of those claimed (see the entire document). Lutter et al.'s preparations exhibit impact properties which are not seen to differentiate from those of applicants' claims based on the materials and make-ups of the preparations claimed.

The claims are not seen to differ from Lutter et al. based on applicant's claims' recitation of the term "semi-rigid". Although the term "semi-rigid" may be of use to practitioners in the art for purposes of classification of the different materials for research and application purposes, this term does not lend the claims the weight of a limitation in a patentable sense. This term without further definition in the claims does

not serve to distinguish the instantly claimed foams from other flexible (and/or rigid) foams based on the employment of this term alone.

The claims are not seen to differ from Lutter et al. based on the employment of the limitation "having a propylene oxide extended tip", because this limitation is only seen to require that propylene oxide be employed in the "growth" of the polyols from their respective initiator molecules.

Lutter et al. does differ from applicants' claims in that it does not specifically require that amine based polyether polyols be employed in their preparations. However, Lutter et al. does recite that amine initiators, and, particularly, the specific amines of applicants claim 32, can be used in the practice of their invention for the purpose of providing adequate isocyanate reactive components(see column 7 line 53 – column 8 line 19, as well as, the entire document, again). Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the amine initiators disclosed by Lutter et al. in the preparations of Lutter et al. in blended combinations for the purpose of providing their isocyanate reactive effect in the preparations of Lutter et al. in order to arrive at the products and/or processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Falke et al.(6,316,514).

Falke et al. discloses preparations of polyurethane foam preparations wherein isocyanates having isocyanate content values as claimed by applicants are combined and reacted with polyol compositions which are polyether polyols based on various initiators inclusive of glycerols, amines, alkanolamines, and other initiators and wherein the compositions are combined at an NCO index as defined by the claims and in the presence of various catalyst which are encompassing of those claimed (see the entire document). Falke et al.'s preparations exhibit impact properties which are not seen to differentiate from those of applicants' claims based on the materials and make-ups of the preparations claimed.

The claims are not seen to differ from Falke et al. based on applicant's claims' recitation of the term "semi-rigid". Although the term "semi-rigid" may be of use to practitioners in the art for purposes of classification of the different materials for research and application purposes, this term does not lend the claims the weight of a limitation in a patentable sense. This term without further definition in the claims does not serve to distinguish the instantly claimed foams from other flexible (and/or rigid) foams based on the employment of this term alone.

The claims are not seen to differ from Falke et al. based on the employment of the limitation "having a propylene oxide extended tip", because this limitation is only seen to require that propylene oxide be employed in the "growth" of the polyols from their respective initiator molecules.

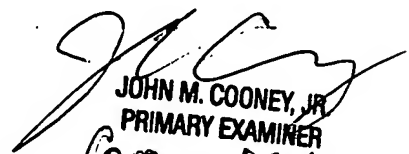

Falke et al. does differ from applicants' claims in that it does not specifically require that amine based polyether polyols be employed in their preparations. However, Falke et al. does recite that amine initiators, and, particularly, the specific amines of applicants claim 32, can be used in the practice of their invention for the purpose of providing adequate isocyanate reactive components(see column 6 lines 27-48, as well as, the entire document, again). Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the amine initiators disclosed by Falke et al. in the preparations of Falke et al. in blended combinations for the purpose of providing their isocyanate reactive effect in the preparations of Falke et al. in order to arrive at the products and/or processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

Applicant's arguments with respect to claims 1-32 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Cooney whose telephone number is 571-272-1070. The examiner can normally be reached on M-F from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck, can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
